## Report of Craigmyle U. F. W. A.

A regular meeting of the Craigmyle U. F. W. A. was held in the Methodist church building on Thursday, July 27th, eleven members being present.

Miss Braseth, the secretary, having failed to put in an appearance the minutes of the former meeting could not be read.

A request having been sent to G. H. Hutton, superintendent of the experimental farm at Lacombe, for a lecture on "Potatoes," their culture, storing and best methods of co-operative shipping and marketing, and a favorable response given, it was moved by Mrs. W. Nixon, seconded by Mrs. Steele, that being the date at 7:30 p.m., that being the date of the men's meeting.

Mrs. Rogers, the energetic convenor of the gopher contest committee, gave the following report: The following local business men are donating the prizes for this contest: Messrs. Bell, Innis, Crawford, Gage, Anderson, Landron, Malcolm, Axvig. Already the children in some localities have exceeded our expectations. Keep it up, little folks, your reward is sure.

Mr. Blore, the district director, being present, explained the working of the fat stock shipping association formed by the men's union and urged the women to join forces with the men to ship out their fat poultry by car loads in the fall. He pointed out in a forcible manner the way in which the farm women had been victimized on the sale of their feathered stock, receiving in many cases little more than half its value.

After some consideration it was decided to appoint a committee to attend to the registration of the available stock and attend to all matters connected with the shipping. The names on the committee are: Mrs. Steele, Mrs. Martin, Mrs. Imler, Mrs. Brown and Mrs. E. Stevenson.

The president, in calling upon Mr. Blore to address the meeting, said that now when the suffrage had been extended to women that it was up to them to inform their minds on all public questions of importance so that they might use their right to the benefit of their homes and families, their country and nation. However, this is more easily said than done, for the western farm woman is about the hardest worked person under the sun, very few of them have time to read and study, and it has been thought advisable to occasionally invite some students well informed man to present these questions from the farmer's standpoint.

Mr. Blore in his address spoke of the large and equal suffrage bills and then couched briefly the initiative, referendum and recall, as advanced by the U. F. A. Mrs. Harvey Nixon and Miss Joyce Farrow each favored the ladies with a song.

At the close of the meeting Mrs. Nelson passed around a plate of delicious sandwiches, which were highly appreciated.

Jean Stephenson, Pres.

An agent for the Maytag washing machine was in town yesterday demonstrating a new invention in a power washer. The machine is driven with a half horse power gaso- line motor placed in under the washer and turns both machine and wringer. The motor can be easily detached and used to run cream separators, ice cream freezers, etc.

The twin twine dealers have disposed of about all of the twine they have on hand and say it is impossible to get any more at present from the wholesale centers. We understand that a large number of dealers throughout the provinces have sold out of twine and it looks very much like some of the farmers will not get enough twine to bind their crops.

The Sewing Guild acknowledges with thanks the following donations: Mr. and Mrs. W. A. Miller, 25; P. Pervost, 7 doz eggs; Mrs. Deppre, 12 knitted washcloths.

## AGRICULTURAL MEETING HELD

Directors make final arrangements for Munson Fair Wednesday Aug. 16

Minutes of meeting of directors held on Aug. 1st, President C. H. Adcock in the chair.

It was moved by Jas. Cameron-Gibb, that the minutes of last meeting be adopted as read.

Moved by Cameron-Dick, that members of the society only be admitted to the grounds free on showing at the gate their membership ticket and wearing their membership badge, and all their children under ten years be admitted free.

Moved by Dick-King, that all children under ten years be admitted to the grounds free.

Moved by Cameron-Bowey, that an appropriation be set aside to engage the Drumheller brass band for the afternoon.

Moved by Bowey-Dick, that the secretary be requested to ask the Ladies Aid to furnish one meal for members of the Drumheller brass band and that the Women's Institute be asked to furnish the other meal. Carried.

Moved by Bowey-Cameron, that the Women's Institute be granted a free booth on the fair grounds. Carried.

Moved by Bowey-Cameron, that an appropriation of \$200 be set aside for special features on the grounds in the way of vaudeville performances which the secretary may see fit to hire.

Moved by Bowey-Cameron, that the secretary write to Alex Galbraith, superintendent of fairs and institutes, inviting him to attend our fair.

Committees appointed for the fair:

Horses—W. C. King, J. G. Reed and T. H. Hickens.

Cattle—Jas. Russell, S. I. Hamby and D. H. McDermid.

Hogs and Poultry—Wm. Gibb, Jas. Cameron and Q. Dick.

Grain, Grasses and Vegetables—W. F. White, J. M. Turnbull and A. Finlayson.

Moved by Bowey-Cameron, that the Women's Institute be asked to furnish committees of three to look after the placing of all fancy work, Bowey's dairy products and domestic products at the fair, and ask the same to provide judges for the same with the exception of dairy products.

The same committees as in the adult classes will handle the children's section with the exception of drawing and writing and tug of war.

Committees appointed for balance of children's section—Mrs. J. G. Reed, Rev. J. G. Rogers and R. L. Harvey.

Moved by Bowey-Cameron, that the secretary be authorized to buy feed and water for the stock on the grounds.

A committee of Messrs. Hamby, Bowey, McDermid, Adcock and Jackson were appointed to look after the grounds and fix up the stalls for the live stock.

Moved by Bowey-Cameron, that the badges on hand be given out at the gate with tickets to wear and that the admission fee be fixed at 25 cents.

Moved by Bowey-Cameron, that the secretary be instructed to pay account of the Munson Mail for prize lists as per verbal agreement of \$75; also account of \$6.50 for envelopes.

Moved by Cameron-Bowey, that the meeting adjourn.

## RED CROSS NOTES

The Sewing Guild acknowledges with thanks the following donations: Mr. and Mrs. W. A. Miller, 25; P. Pervost, 7 doz eggs; Mrs. Deppre, 12 knitted washcloths.

## DEPT. HAS CLOSED SUB-OFFICE HERE

B. Skafie, who has been in charge of the local branch of the Dominion land office since Leonard Elliott enlisted, received a wire from the Department of the Interior, Ottawa, last week that instructions had been issued to close the office and to transact no further business until the Inspector of Agencies communicated with him.

Mr. Banmeron, Deputy Inspector of Agencies, was in town yesterday and took over the books of the office.

In speaking to a representative of the MAIL, he said he did not know their reason for closing the sub-office here, but that a large number of sub-offices throughout the province are being closed and also three branch offices in the larger towns.

This is going to mean a great inconvenience to those in the district who want to make application for patents and considerable other business is transacted through this office. The business men are taking this matter up and will try to get the office reopened.

## MUNSON HOTEL CHANGES HANDS

An important business change took place this last week when a deal was closed whereby the Munson Hotel passed into the hands of H. L. Imerson of Vernon, B. C. The new proprietor, with his family, arrived in town on Thursday evening and took charge of the hotel.

Mr. Carpenter has taken over the dining room and will start serving meals today. Mr. Imerson has put in a full line of soft drinks and the bar is now open for business. The meat market will be reopened soon with a full line of meats and will also be conducted by Mr. Carpenter.

Committees appointed for the fair:

Horses—W. C. King, J. G. Reed and T. H. Hickens.

Cattle—Jas. Russell, S. I. Hamby and D. H. McDermid.

Hogs and Poultry—Wm. Gibb, Jas. Cameron and Q. Dick.

Grain, Grasses and Vegetables—W. F. White, J. M. Turnbull and A. Finlayson.

Moved by Bowey-Cameron, that the Women's Institute be asked to furnish committees of three to look after the placing of all fancy work, Bowey's dairy products and domestic products at the fair, and ask the same to provide judges for the same with the exception of dairy products.

The same committees as in the adult classes will handle the children's section with the exception of drawing and writing and tug of war.

Committees appointed for balance of children's section—Mrs. J. G. Reed, Rev. J. G. Rogers and R. L. Harvey.

Moved by Bowey-Cameron, that the secretary be authorized to buy feed and water for the stock on the grounds.

A committee of Messrs. Hamby, Bowey, McDermid, Adcock and Jackson were appointed to look after the grounds and fix up the stalls for the live stock.

Moved by Bowey-Cameron, that the badges on hand be given out at the gate with tickets to wear and that the admission fee be fixed at 25 cents.

Moved by Bowey-Cameron, that the secretary be instructed to pay account of the Munson Mail for prize lists as per verbal agreement of \$75; also account of \$6.50 for envelopes.

Moved by Cameron-Bowey, that the meeting adjourn.

## MUNSON HOTEL Under New Management

The Dining Room has been re-opened and regular meals are now being served with Wm. Carpenter in charge

# Chinese Embroidery Enriches Milady's Wardrobe!

*Some Use the Mandarin  
Coat for Evening*

*An Oriental  
Headband*

*A Veritable Chinese  
House Gown*

THERE is more or less of a glamour, a hint of the bizarre about oriental embroidery, especially the Chinese. Its gorgeous coloring, its curious dragons and symbolic birds and flowers, as well as the exquisiteness of the stitches themselves, endear it to the heart of a woman who has any semblance of artistic sense. Why not, therefore, make use of these lovely embroideries for milady's wardrobe? says Fashion.

Of course, one would not care to go shopping decked out in Chinese embroidery, but you may wind a bit of embroidered silk, picked up at some Chinese shop, around the crown of the new felt sailor, and feel assured that you look nothing more than unusually smart thereunder.

One's afternoon parasol, in delicate tinting of light sea green, for carrying with thin summer frocks, may have the most Chinese of dragons embroidered over its surface. The parasol is perfectly plain, the better to show off the silky shadings of the fiery beasts.

There have been some women fortunate enough to possess one of the famous mandarin robes from China. These make delightful summer evening wraps, especially because of the informality which

summer evening wraps usually assume. When one can use a wide silk scarf for a summer evening wrap, or a white polo coat, surely one can wear an exquisitely embroidered silk coat like the purple one pictured.

Perhaps some traveled member of the family has presented you with a Chinese robe, handsomely embroidered on black satin and slightly padded for warmth. Do not fold it away in camphor. It makes a delightful lounging robe, and can be slipped over thinner negligees for a snooze on one's chaise longue or day bed. A warm negligee is found useful all the year round, even for the occasional chilly rainy afternoon in summer. You can use your Chinese coat, and rejoice in its artistic stitches.

Are you one of the artistic band which discards tailored clothing in the house and goes over the purely artistic for house wear? You will appreciate this way of life. There is a certain type of Chinese embroidery for a house frock that demands attention from one's personal friends. The skirt has been made from the embroidery trim, and the blouse is a piece of plain silk

*Dragons Disport*

## Canada's Big Buffalo Herd

**Largest in the World, It Now Numbers 2,077 and is Growing Steadily.**

The Canadian government is interested with signs of life in the herd, and to preserve the buffalo from the swift extinction which threatened it a few years ago, has taken steps to assist in the growth of the herd at Wainwright Buffalo Park, Alberta, just outside of Lethbridge, Dominion Parks Commissioner.

The report shows that, in April, 1909, the herd numbered 1,770, and then it has gradually increased at the rate of about 200 a year, until today there are 2,077.

The history of this herd, now the largest in the world, dates back to 1884, when the first 150 animals captured four little bison calves—two bulls and two cows—by cutting the fence of a station, and driving them into a trap.

Since often men by old and characterless young creatures suddenly follow the herd, and then drive them who had slain or driven off their mothers.

The Indian in question gave them to the park authorities, and they were kept as pets, and became as domesticated as ordinary cattle.

When the Indians left, the herd each had a calf. From that time on until in 1884 there were thirteen head, and the park authorities sent word to tax the minister decided to sell them.

Ten head were bought for \$250 each, and the rest were sold to Indians who were ranching on the reservation, and were sheared enough to see that they would be valuable.

The herd increased under their care, and in 1890, when it became possible to sell specimens at high prices, the average price increase may have been from the observed fact that half the cows give birth to calves every year, and twice calves are common.

As a rule the bison calf is a very hard creature. There are some instances of calves being born dead, and others finding their feet in less than a minute after birth, showing birth within half an hour.

In 1906 the Hon. Frank Oliver, Minister of the Interior, asked for an option on the 600 head still belonging to the Indians.

They were all bought for \$300.00.

The "round-up" lasted two months, and was conducted by Indian boys, horsemen picked for their ability from Alberta, and was accomplished with a loss of less than one per cent.

Since it became the property of the Government, the herd has fared well in the new National Park at Wainwright. The park is a favorite resort for the traveller. It has an area of 130 square miles, and is securely enclosed with a high fence six feet.

## Silk From Sawdust

**Artificial Silk From Sawdust and Other Lumber Waste**

**No Problem**

Making artificial silk from sawdust and other lumber waste is the latest experiment of the United States forest products commission.

The use of artificial silk made directly from wood is increasing, because its chief use in the cellulose plant was in the manufacture of braids and trimmings, but recently it has been used in the manufacture of artificial silk has become an industry of vast importance. Other uses for artificial silk are in the manufacture of neckties, linings, tapestries, etc., neckties, ribbons, sweater coats, etc. About 35,000,000 yards of artificial silk are used annually in the United States.

There are several methods of manufacturing artificial silk. One way is usually made by treating the wood pulp with caustic lye, after which it is dried and then the cellulose is then diluted with more caustic lye to form a viscous mass, which is then dried through to form threads, which are hardened by heat.

Another method is to add water to the wood pulp, and then boil it.

Still another method is to add acid to the wood pulp.

After water has been added to the wood pulp, the cellulose is then extracted.

After the cellulose is extracted, the wood pulp is then dried.

After the cellulose is dried, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then dried again.

After the cellulose is dried again, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.

After the cellulose is mixed with water, it is then

reduced to a powder, and then it is

mixed with water to form a paste.
